3 Configuration Overview

3.1 Install logic

- a. The AGM Adobe Creative Cloud Suite packages are designed to contain the individual components in each bundle required to complete the install of the product. Please see the following flowcharts for detailed application logic.

(Figure 1)

## **4 Known Issues**

### **4.1 Current Issues**

- Adobe After Effects application may warn “The program requires QuickTime to be installed for all features to work”. QuickTime is not installed as part of the Adobe Creative Cloud Suite.
- The following applications may have the option to update the application from a menu option or attempt to update on their own, this option will not work for non-administrators and should not be performed; Adobe Extension Manager, Bridge CS6, Flash Player Updates, Adobe AIR, Edge Reflow, Edge Code.
- Other known issues will be documented and communicated to the field via FAQs, an AKO Notice, TTPs, etc.
- The size of the installation package (~13GB) limits the number of methods Army organizations can use to deploy the Adobe CC products.
